Dear Lawrence Lake Residents and Users,

We received results from the May 20th sample that was collected from the WDFW boat launch. The sample contained the toxin Anatoxin-a at a very high concentration that is **over the health advisory level** of 1 ug/L (parts per billion). Therefore an advisory will be posted.

Those people who have volunteered to post the yellow and black warning signs, please do so at this time. We will continue to sample as long as the blue-green algae bloom remains.

Please avoid contact with the lake water, especially areas with visible algae or algae scum on the surface. Keep pets and children out of the water. When fishing, it is safest to catch-and-release any fish caught during a toxic algae bloom.

Please pass this information on to your neighbors. More information about blue-green algae can be found on our website.

If you have any questions please call us at 360-867-2626 or send an email as staff will check email daily for follow-up.
