Oil Based Paint can be taken to HazoHouse for free. Oil paints, stains, varnishes, and thinners are toxic and flammable. They need to be handled as hazardous materials.

Latex Paint from private residences is no longer accepted at HazoHouse unless the paint was manufactured before 1989, when some paints still contained lead and mercury. Latex paint must be dry to be disposed of in the regular trash. Trash collection crews will not accept liquid paint.

To Dry Latex Paint: If can is less than 1/4 full, remove lid in a safe, dry and well-ventilated area and allow to air-dry there. If can is more than 1/4 full, open lid and solidify contents with kitty litter, grass clippings, shredded paper or commercially available paint drying gel. Once the paint is solidified or unable to spill out of can, place the can with lid off in regular trash.

Businesses: Qualifying businesses, including painting contractors, can dispose of latex paint and hazardous waste at HazoHouse for a small fee. Registration forms are online at www.co.thurston.wa.us/health/ehhw/pdf/HazoHsReg.pdf or call 360-867-2491. Not sure if your business is eligible? Call the Hazardous Waste Hotline at 360-867-2664 for more information.

Paint Disposal Options:

412 Lilly Road NE
Olympia, WA 98506
Phone: 360-867-2674
Fax: 360-867-2601
TDD: 360-867-2603

HazoHouse is located at 2418 Hogum Bay Road NE off I-5 Exit 111 in Lacey.
Open Friday thru Tuesday from 8 am to 5 pm (Closed Wed. & Thursday and Holidays)

See inside “After You Paint” and “Paint Disposal Options” for what to do with leftover latex paints.

Additional information on healthy indoor painting can be found at www.co.thurston.wa.us/health/ehhm/paint.html or by calling Thurston County Environmental Health at 360-867-2674.

For more information on paint disposal call the Hazardous Waste Hotline at 360-867-2664. For recycling questions contact the WasteLine at 360-786-5494 (recorded line) or visit www.ThurstonSolidWaste.org.
Choosing Paint:

- **What's In Paint?** Most paints contain chemicals called volatile organic compounds (VOCs) that give paint its consistency and evaporate as it dries. These VOCs can impact your health and the environment.
  - Short-term health effects of VOC exposure include eye irritation, headaches, nausea, fatigue, and dizziness.
  - Long-term exposure can damage the central nervous system, liver, and kidneys.
  - Pregnant women, young children, people with respiratory problems (like asthma or COPD) and individuals with high exposure rates (like commercial painters) have higher risks of health effects.
  - Volatile organic compounds also contribute to air pollution by forming ground-level ozone. Ozone is a factor in causing lung disease.

- **Smart Planning:**
  - Purchase only as much paint as you need for the job. Estimate using 1 gallon for every 400 ft² or 1 quart for every 100 ft².
  - If you live in an apartment, inform neighbors of your painting project. Property managers should notify tenants in multi-family homes when painting is planned.
  - Be sure to read and follow label directions carefully.

- **Before You Paint:**
  - Select water-based (latex) over oil-based paints and stains. Most latex paints still contain VOCs but they don't require toxic solvents for cleanup.
  - Look for low-VOC paints, ideally less than 50 grams per liter (GPL).
  - Consider buying recycled paint. (See chart below).

- **While You Paint:**
  - Avoid spray painting to minimize breathing fumes.
  - Ventilate your workspace: Keep windows open, use an exhaust fan to draw fumes from the home. Regular air conditioners do not filter indoor air pollutants.
  - Use protective gear specified on the label such as gloves, goggles and a respirator with the proper filter. Dust masks do not protect against VOCs.
  - Keep pregnant women and children away. Tape off work area with tarps/sheeting to reduce fumes and keep dust from spreading through the house.
  - Take extra precautions if using oil-based paint. The health risks are greater and there is an added risk of fire. Don't smoke; remove sources of flames and sparks. Seal used rags in metal containers.
  - Keep cans tightly closed and out of children's reach.

- **After You Paint:**
  - Continue to ventilate painted areas for 2-3 days.
  - To store leftover paint in original container: cover paint can opening with plastic wrap, tightly secure lid, and store upside down. Or, store in smaller sealable container for future touchups. Clearly label containers, including contents and date, and store out of reach of children.
  - Donate no longer needed cans of paint to local theater groups, schools, or other groups in need. Or, list your unwanted items at [www.2good2toss.com](http://www.2good2toss.com).
  - See reverse for how to dispose of leftover paint.
