Fight Lice!

Steps you can take with your child to prevent and treat head lice.
• Don’t let kids share hats or combs
• Check regularly for head lice
• Don’t overreact or over treat
• Pesticides aren’t necessary
• Use a special lice comb
• Wash and clean household items
Keep in mind. . .  
Head lice are passed from one person to another. They can’t jump or fly. Getting head lice is like getting a cold. It’s not a cause for blame or shame. If your child comes home with head lice, stay calm. Don’t overreact or over treat.

What they look like. . .  
The pictures below are many times larger than actual size. Adult head lice are about the size of sesame seeds. An egg is smaller than the head of a pin.

What to do. . .  
1. Pesticides aren’t necessary.  
Lice shampoos contain pesticides that are harmful to children. These pesticides almost never kill all the lice and nits. The danger is from overuse and not following directions.

2. Use a special lice comb to remove all the lice and nits.  
The only proven method for getting rid of head lice is to thoroughly comb the hair twice a day for 21 days with a special lice comb. These fine-toothed combs remove both lice and nits. Wet the hair and completely dry it. It’s best to use a blow dryer. This loosens the nits. Wet the hair again and part it into sections. Comb a little at a time, working through each section. Keep the hair wet as you go. Wipe the comb off with a tissue after every stroke.

3. Clean and wash household items.  
- After using a lice comb, wash towels and clothing in HOT water. Sanitize combs and dispose of tissues.
- Wash bedding, clothing, hats, coats and scarves. Use the HOT cycle on the washer and dryer.
- Vacuum carpets, furniture, day packs and car seats.
- Seal items you can’t wash in a plastic bag for 21 days.

You may need to repeat these steps until all the lice are gone.

How to prevent getting head lice. . .  
- Teach your children not to share combs, hats, scarves and coats.
- Check your child’s head for lice and nits several times a week.
- Check all family members for lice and nits.
- Frequently clean stuffed toys, head phones, sports gear, sleeping mats, pillows, or anything that comes in contact with your child’s head.
Dear Colleague,

The Washington State Department of Health (DOH) is pleased to provide camera-
ready art for printing this educational material. To ensure that the original quality of
the piece is maintained, please read and follow the instructions below and the
specifications included for professional printing.

• **Use the latest version.** DOH materials are developed using the most current
information available, are checked for clinical accuracy, and are field tested
with the intended audience to ensure they are clear and readable. DOH
programs make periodic revisions to educational materials, so please check
this web site to be sure you have the latest version. DOH assumes no
responsibility for the use of this material or for any errors or omissions.

• **Do not alter.** We are providing this artwork with the understanding that it
will be printed without alterations and copies will be free to the public. Do
not edit the text or use illustrations or photographs for other purposes
without first contacting us. Please do not alter or remove the DOH logo,
publication number or revision date. If you want to use a part of this
publication for other purposes, contact the Office of Health Promotion first.

• **For quality reproduction:** Low resolution PDF files are intended for black
and white or color desktop printers. They work best if you are making only
one or two copies. High resolution PDF files are intended for reproducing
large quantities and are set up for use by professional offset print shops. The
high resolution files also include detailed printing specifications. Please match
them as closely as possible and insist on the best possible quality for all
reproductions.
