hazard areas are based on soil types that are particularly susceptible to landslides. Steep slopes are calculated using the Thurston County GeoData Center's public dataset. Steep slopes are comprised of areas with greater than 45% slopes. Landslide hazard areas are derived from Soil Conservation Service (SCS) soils data. Under no circumstances, including, but not limited to negligence, shall Thurston County be liable for any inconvenience of any information disclosed on this map. Nor does the County accept liability for any errors or omissions in this map. The data used in this map is for informational purposes only and is not intended for navigation or legal purposes.

*Steep slopes are calculated using the Thurston County GeoData Center's public dataset. Steep slopes are comprised of areas with greater than 45% slopes.
