4. 6:40 P.M. WORKSESSION: CAO – Special Reports, Science Report Draft, Distribution of New Material, Fish and Wildlife Critical Areas Discussion as Time Allows

Staff: Scott Clark, Cynthia Wilson, Jeremy Davis & Andrew Deffobis

Mr. Deffobis briefed the commission on the materials that were handed out to the Planning Commission this evening. On Monday this week staff had e-mailed the Planning Commission the Fish and Wildlife Habitat Conservation Area Chapter and the Special Reports Chapter. A staff memorandum was handed out this evening and hard
copies of said chapters. The version of the chapters that was given to the Planning Commission this evening was a little different because staff added section 24.25.010 Applicability. A table of content was included as well for the Wetland BAS summary that was handed out last week. Mr. Davis also worked on a BAS summary on the Mine Hazards Chapter Coal Mine Hazards. A letter was also sent from the National Marine Services to FEMA and handed to the Planning Commission as a handout to clarify the biological opinion, it gave some background on the document and guidance on some common concerns including how jurisdictions can meet the requirements of the biological opinion. The last chapter that is still due to come before the Planning Commission is the second draft of the Critical Aquifer Recharge Area Chapter which staff is still working on with Environmental Health.

Staff first asked the Planning Commission if the format and level of depth for the Wetlands Best Available Science was going to work for them. This is the model that will be used for all following reports. Most comments were a yes about the depth however some struggled with the sorting and asked about using dates or primary author or year instead. Commissioner O’Connor made a few comments starting at page two and would like streaming underlined. Next, on page four change Orca to Orca’s. Other comments were that the EIS was very clear and fast to read. A suggestion was made to add something that talks about the regulatory requirements in BAS and everything. One of the requirements for something to be considered BAS is that it be used in the appropriate context. Examples were then given. Further discussion ensued.

Commissioner Davis asked why staff had picked and chosen particular sentences and added footnotes that sent people to the BAS for further clarification when almost the entire document could have a footnote. The reason being is why each part doesn’t reference the BAS how was the decision made. Staff in return stated that this particular section was from prior staff denoting back to the BAS. If you look at the 2005 draft compared to the draft now staff has continued to reference to the BAS but the footnotes has not continued because more science has been updated. The new draft will not contain the footnotes but the 2005 draft will continue to be Appendix A to the new draft to show the BAS reference. 24.25-3 doesn’t have any fish species listed and by and large will not be stocked however staff needs to make sure this particular area is covered. The planning commission thinks fish bearing streams should be included to this section. Rather than using the WAC language staff will retool this section so that it actually details specifically the WACs conservation in no particular order. Tables were then discussed including low and high impact items within riparian areas. WDFW will be reviewing the list within the draft that lists status of endangered species. Currently the list only shows species that are listed. Verbiage will be added to the list that says the list is in addition to any federal or state listed species. This statement will be listed on each table. 24.25-10 has a reference; federally listed species and habitats 24.25.065, the animal and plant species listed under the federal endangered species act 64CFR14307 as endangered or threatened are candidates for the listing and their habitats for primary association (consult the USFWD and National Marine Fisheries Service for the current listing). Proposed species was discussed to be added into the reference.
Again Mr. Clark stated that the Planning Commission may send any comments/questions to staff and they will research the issue and bring back information to the next meeting.

Within the Special Reports section Commissioner Davis pointed out that we are keeping an existing standard of a proposal for an activity within 600 feet of an important habitat under 24.35.260C. This section will be changed under current planning review and staff is still working on the wording for the change. Still within this section under 26.35.270C; project activities will not impact the values or functions of an important habitat area or associated buffer the question was brought up that this does actually require a report to determine if functions or values are being impacted? The intent is that all of the construction activities if a critical area is on the property but does not encumber the entire property that those activities take place outside of it, away from the critical area. A simpler way of saying this would be; the project will have less than 5,000 square feet of impervious service, no activities what so ever will be conducted within an important habitat area or associated buffer and then keep the last letter (section) of judgment authority. Staff will be working on the rewording of this section including a way of waiving the report if the size of the property and the construction proposed does not impact the critical area. The permitting authority can and may also make the ultimate decision and will have the right to do so. This section will be reviewed to make sure it is in accordance with the Drainage Manual Flow Chart. A diagram chart was requested by the Planning Commission on what type of project may be subject to a waiver especially since the 600 feet adjacent buffer is mentioned throughout the section.

5. 7:52 P.M.  Set Public Hearing for Critical Areas Ordinance
Staff: Scott Clark, Cynthia Wilson, Jeremy Davis & Andrew Deffobis

Mr. Clark discussed the response from the doodle pool about attendance for the upcoming public hearing for CAO. The November dates did not work for many of the Planning Commissioner’s. The next available dates discussed were December 3rd and December 10th. The majority of Planning Commissioner’s could make the December 10th proposed date. The following Planning Commission meetings after the December 10th hearing for the CAO schedule were then discussed to determine a schedule to review public comments. Staff thinks that the final draft will be out by November 18, 2011.

MOTION: Commissioner Earle moved to set the Critical Areas Ordinance public hearing on December 10, 2011. Commissioner O’Connor seconded. Motion carried.

6. 8:02 P.M. STAFF UPDATES

Mr. Clark provided the following staff updates:

- The location of the public hearing for CAO will be announced at the next meeting.
7. **8:03 P.M. CALENDAR**

   October 19, 2011 – All Commissioners will be in attendance.

8. **8:03 PM ADJOURN**

   With there being no further business, Chair Lane adjourned the meeting at 8:03 p.m.
