

## Stormwater SWALE Inspection & Maintenance Log

Swales are shallow, grass-lined ditches designed to collect, convey, and infiltrate stormwater. Grassy swales also slow down and filter sediment from stormwater. For this reason, grassy swales should never be filled in, not even with pipes and gravel. Swales are often found alongside the road, between the street and residents' front yards.

Facility Number (see parcel map)	Type of Facility	Date Inspected
	Swales	

Street along which swale is located	Problem Noted (Choked with weeds? Filled in?)	Recommended Action	Work Scheduled (date)	Work Completed (date)
